

CLAIMS

What is claimed is:

1. An accessory illuminating device of mobile phone, comprised of a camera lens for transmitting photographed images by the mobile phone and providing an illumination, characterized in that said illuminating device comprises a switch for controlling a battery to supply an electric power to selectively turn on and off a lamp disposed on the mobile phone, and produce an illumination towards a photographing direction for said camera lens of the mobile phone.
2. The accessory illuminating device of mobile phone of claim 1, wherein said illuminating device is an independent base embedded and fixed to the mobile phone.
3. The accessory illuminating device of mobile phone of claims 1 or 2, wherein said lamp is disposed on at least two positions of the mobile phone.
4. The accessory illuminating device of mobile phone of claims 1 or 2, wherein said illuminating device is electrically coupled to a battery of the mobile phone through a circuit.
5. The accessory illuminating device of mobile phone of claims 1 or 2, wherein said illuminating device comprises a circuit electrically coupled to a battery charger for charging the battery.
